DETAILED ACTION

Status of the claims

Applicants' preliminary amendments filed on December 15, 2000 and June 25, 2001 is acknowledged. Amendment to specification at page 4 has been noted. Claims 4 and 9 have been amended. New claims 11 and 12 have been added. Therefore, claims 1-12 are currently pending and are under examination.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 2, 3 and 8, drawn to a process for producing anti-freeze peptides which comprises collecting samples of bacteria from an aqueous low-temperature environment; culturing the bacteria and extracting proteins from the samples; testing and selecting proteins having anti-freeze properties; producing the selected proteins, wherein the bacterial cultures are of *Marinomonas* species and of *Pseudomonas* species, showing 90-95% sequence homology in the 16s rRNA gene sequence with the corresponding sequence in the organism *Marnomonas protea* (SEQ ID NO: 1) and in *Pseudomonas* sp. (SEQ ID NO: 2); and a nucleic acid sequence encoding the amino acid sequence of SEQ ID NO: 3; classified in Class 435, subclass 71.2; Class 536, subclass 23.7, 23.1.
- II. Claims 4-7 and 9-12, drawn to a protein having anti-freeze properties and having a sequence homology with amino acid sequence of SEQ ID NO: 3, wherein the protein is isolated from a culture according to claims 1, 2 and 3; a food product comprising the protein of claim 4, wherein the food product is selected from the group comprising frozen vegetables and frozen confectionary; classified in Class 530, subclass 300, Class 426, subclass 656.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product of group II, the protein can be made using an amino acid synthesizer.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

A telephone call was made to Attorney Gerard McGowan on May 2, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.
